

**METHOD FOR REDUCING PRESSURE DAMAGE TO SKIN
OF A PERSON, AND CORRESPONDING SKIN PROTECTIVE DEVICES**

Abstract of the Disclosure

A method for reducing pressure damage
to skin of a person includes determining a location on
the person susceptible to pressure damage, and
5 adhesively securing a skin protective device to the
location. The skin protective device includes a
substrate having an inner surface, and an outer
surface. An adhesive layer substantially covers the
inner surface, and at least one fluid-filled cell is on
10 the outer surface to cushion the skin of the person.
